Supported by the Consulate General of the Czech Republic in New York, Bohemian Benevolent & Literary Association and the Vermont Compost Company.

The P&F project presents a collection of objects made by upholstering/laminating cardboard with old fabrics. Specifically, it is a shelf, lidded container, and side-table—common household objects.

The core concept is to consider material availability and greater ideas of expense.

The technique of upholstering/laminating the fabric allows room for experiment. It promotes an individual approach to selecting materials and planning an overall look.

Building Instructions

A 1x Top lid. Diameter 300mm
Upholstered top side.

A1 1x Bottom lid. Diameter 260mm
Upholstered bottom side.

C 2x Bottom. Side of hexagon is 90mm
Upholstered inner and outer sides.

Lines indicate direction of cardboard. Outer lines indicate orientation of fabric. Always use a larger piece of fabric than the cardboard, as folds require excess material. Using masking tape helps keep upholstery in place while working. Ironing fabric before use is recommended. Confirm cardboard pieces match before gluing. Work quickly while gluing. Use spray glue,

fabric glue, or paper glue. For best results, use a heavy weight to keep cardboard pressed while drying. Make individual pieces, then glue together when upholstery is dry.

What you need: leftover fabrics, cardboard pieces, paint brush, scissors, ruler, cutting mat, square/90° angle, utility knife, and dull knife for scoring folds.

B 10x Side panels. 90 x 300mm
Upholstered both sides.

A2 1x Handle. Upholstered all around.

Guide to assembly and proper upholstering of pieces.
